Novel heterostructure designs for surface emitting light sources

Author: Gerhold, Michael David

Degree: Ph.D.

Year: 1999

Corporate Source/Institution: University of Michigan (0127)

Source: VOLUME 60/07-B OF DISSERTATION ABSTRACTS INTERNATIONAL.

PAGE 3451. 129 PAGES

ISBN: 0-599-39738-1

...are shown to promote enhanced device performance and possibilities for future applications in flat panel **displays** and optical communication systems.

A new type of vertical cavity surface emitting laser is proposed...

...regrowth of quantum wells to provide different gain regions for the surface and edge-emitting **sections**. The **multi**-mode rate equations are used to evaluate the possibility of such a laser and the...

...discussed. It is seen that efficient surface photon emission is possible for high vertical cavity **mirror** reflectivities and sufficient separation of bandgap energies for the two quantum well gain regions.

Another...

...observed in the photoluminescence (PL) spectra of these heterostructures is believed to originate from considerable **overlap** of the carrier wavefunctions and Γ -X bandmixing. In addition to the sharp no-phonon

SHADE MEMBER FOR **PROMPTER**

ABSTRACT

PROBLEM TO BE SOLVED: To provide a shade member that can sufficiently protect a half **mirror** from an impact force by configuring the shade member, which is used for a **prompter** to enclose an optical path for an image formed between an image **display** means of the **prompter** and the half **mirror** , in a folding way so that its rear part is folded onto an upper face...

... each reinforcement plate of the folded upper part and rear part to protect the half **mirror** .

SOLUTION: A shade cover 100 of this invention is configured so that its rear part...

... fitted thereto and the rear part 106 with a reinforcement plate 110 fitted thereto are **overlapped** one another on an upper part of a casing 58 of the half **mirror** 14, the reinforcement plates 108, 110 protect the half **mirror** 14.

... has display unit having mirror , pair of objective lenses, pair of one way mirrors and couple of eye lenses

...Abstract (Basic): 3D image formation device has a 3D image generator (200) which includes a pair of **TV cameras** (201,202) and a range detector to output the information regarding the position of the target. The output from the **TV cameras** are given to a pair of televisions (101a,101b) of the 3D **display** device (100). The **display** device has a **mirror** (104), a pair of objective lenses (102a,102b), a pair of one way **mirrors** (103a,103b) and a couple of eye lenses (105a,105b...

...The ray from the monitor is focussed on a one way **mirror** which partly reflects the ray to the **mirror** and transmits the ray to the eye lens.

The eye piece is positioned at the eye ball focus position of a pair of windows (112a,112b). A vertical **sliding** mechanism (106) moves the **mirror** up and down based on the signal from the range detector...

... **taking positive transparency image signals by TV camera in red, green, and blue colours, and converting them into negative colour signals**

...Abstract (Basic): The colour transparency positive image signals are taken by a **TV camera** (15) in red, green, and blue. The three colour positive image signals (R,G,B...

...Abstract (Equivalent): A photographic **slide** transparency (13) is illuminated (10) and is secured by a colour **TV camera** (15) and the output is adjusted (17). Successive stage process the signals and apply corrections (18-22) before the signal is converted into analogue form for **display** on a monitor (23) and processing (26-28...

...Abstract (Equivalent): The colour **slide** printing method involves producing image signals representing a positive image of a colour **slide** using a colour **TV camera** , converts the positive image signals into negative image signals for each of three colours using a contrast transfer circuit and sequentially **displaying** the negative image signals for the three colours as black-and-white negative images in...

...The positive image signals are sent to a colour nomitor to **display** a positive colour image of the colour **slide** for visual inspection. When the positive colour image on the colour monitor is fuzzy or out of focus, the **slide** is considered to be positioned front side back, and the colour **TV camera** is readjusted to focus on the blac side of the colour **slide** and the image signals are electronically converted so as to **display mirror** images on the black-and-white CRT and the colour monitor...

...ADVANTAGE - Sharp and correct image is provided even when colour **slide** is placed in printer wrong way around. (8pp)

**High-tech prompter takes paperwork out of speech-giving
(Mun Co rolls out Happy Talk Light, a personal electric tele-prompter)**

Nikkei Weekly, v 33, n 1,700, p 11

December 04, 1995

DOCUMENT TYPE: Journal (Japan)

LANGUAGE: English RECORD TYPE: Abstract

ABSTRACT:

Mun Co (Tokyo, Japan) has rolled out Happy Talk Light, a personal electric **tele - prompter** . It will **display** text, transparencies and documents in dim lighting. Documents are placed on the base and projected...

...which comes with a carrying bag and microphone holder. The Happy Talk uses a half- **mirror** , which is a specially coated half-sheet that acts as a reflector screen, while the Speaker has a **mirror** that projects documents or overhead transparencies.
